envelope (By similarity).

C: | DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domain is required for both heterodimerizaty. The bH1 and BH2 domains are required for both heterodimerizaty. The other Bc12 family members and for repression of cell dear continuity. The cleaved by caspases during apoptosis (By similarity). The cleaved protein, lacking the BH4 domain, has continuity (By similarity).

C: SIMILARITY: Contains 1 Bc1-2 homology 1 (BH1) domain. C: SIMILARITY: Contains 1 Bc1-2 homology 2 (BH2) domain. C: SIMILARITY: Contains 1 Bc1-2 homology 3 (BH3) domain. C: SIMILARITY: Contains 1 Bc1-2 homology 4 (BH4) domain. C: SIMILARITY: Contains 1 Bc1-2 homology 4 (BH4) domain. C: SIMILARITY: Belongs to the Bc1-2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                   TIGRFAMS; TIGRO0865; bcl-2; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           entities requires a license agreement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       regulate cell death by blocking the voltage-dependent anion channel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome o, from the mitochondrial membrane. SUBUNIT: Bcl-X(L) forms heterodimers with BAX, BAK and Bcl-2 (By similarity). Heterodimerization with BAX does not seem to be required for anti-apoptotic activity (By similarity). Isoform Bcl-X(L) binds to Siva isoform 1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: Potent inhibitor of cell death. Isoform Bcl-X(L) and apoptotic activity is inhibited by association with SIVA isofoli. Inhibits activation of caspases (By similarity). Appears to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cardiol.

                                                                                                                                                                                      INSUE SPECIFICITY: Bcl-X(S) is expressed at high levels in cells that undergo a high rate of turnover, such as developing lymphocytes. In contrast, Bcl-X(I) is found in tissues containing long-lived postmitotic cells, such as adult brain.

DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domains are required for both heterodimerization with other Bcl2 family members and for repression of cell death.

PTM: Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 apoptotic activity is inhibited by association with SIVA isoform 1. Inhibits activation of caspases (By similarity). Appears to regulate cell death by blocking the voltage-dependent anion channel (UDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane. The Bcl-X(S) isoform promotes apoptosis.

SUBUNIT: Bcl-X(L) forms heterodimers with BAX, BAK and Bcl-2. Heterodimerization with BAX does not seem to be required for antiapoptotic activity. Isoform Bcl-X(L) binds to Siva isoform 1.

SUBCLIJULAR LOCATION: Mitochondrial membranes and perinuclear

Genomic organization, promoter region analysis, and chromosome
of che mouse bel-x gene.";

L. Immunol. 158:4750-4757(1997).
C. I-FUNCTION: Potent inhibitor of cell death. Isoform Bcl-X(L) anti-
proportion: activity is inhibited by association with SIVA isoform
of the mouse bel-x (By similarity). Appears to
regulate cell death by blocking the voltage-dependent anion
channel (VDAC) by binding to it and preventing the release of the
caspase activator, cytochrome c, from the mitochondrial membrane.
The Bcl-X(S) isoform promotes apoptosis.
C. ISUBUNIT: Bcl-X(S) isoform promotes apoptosis.
SIBUNIT: Bcl-X(L) forms heterodimers with BAX, BAK and Bcl-2 (By
similarity). Heterodimerization with BAX does not seem to be
required for anti-apoptotic activity (By similarity). Isoform Bcl-
cc X(L) binds to Siva isoform 1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MOUSE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             channnel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane. The Bcl-X(S) and Bcl-X(beta) isoforms promote apoptosis.

SUBUNIT: Bcl-X(L) forms heterodimers with BAX, BAK and Bcl-2 (By similarity). Heterodimerization with BAX does not seem to be required for anti-apoptotic activity (By similarity). Isoform Bcl-X(L) binds to Siva isoform 1 (By similarity).

SUBCELIULAR LOCATION: Mitochondrial membranes and perinuclear
                                                                                                                                                                                                                                                                                                                                                                                                   activity (By similarity).

SIMILARITY: Contains 1 Bcl-2 homology 2 SIMILARITY: Contains 1 Bcl-2 homology 2 SIMILARITY: Contains 1 Bcl-2 homology 3 SIMILARITY: Contains 1 Bcl-2 homology 4 SIMILARITY: Belongs to the Bcl-2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IsoId=P53563-3; Sequence=VSP_000521;
TISSUE SPECIFICITY: Expressed in most tissues. Bcl-X(beta) is specifically expressed in cerebellum, heart, and thymus. In the ovary, the predominant form is Bcl-X(L), with a small but detectable level of Bcl-X(S).

DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domains are required for both heterodimerizations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           with other Bcl2 family members and for repression of cell death. PTM: Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     envelope (By similarity).

Isoform Bcl-X(L) antiapoptotic activity is inhibited by association with SIVA isoform 1. Inhibits activation of caspases (By similarity). Appears to regulate cell death by blocking the voltage-dependent anion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Name=Bcl-X(beta)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Name=Bc1-X(S);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bc1-2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Name=Bcl-X(L);

Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding to the apoptosis-activating factor (ApAF-1).

-!- SUBUNIT: Forms homodimers, and heterodimers with BAX, BAD, BAX and Bc1-X(I). Heterodimers, and heterodimers intact BH1 and BH2 domains, and is necessary for anti-apoptotic activity (By similarity). Also interacts with ApAF-1 and RAF-1 (By similarity). SUBCELLULAR LOCATION: Outer mitochondrial membrane, intracellular membrane of the nuclear envelope and the endoplasmic reticulum.

-!- TISSUE SPECIFICITY: In adult chicken expressed, in thymus, spleen, kidney, heart, ovary and brain, with the highest levels in the thomas of the machine highly levels appread in all tigning with

In the embryo, highly levels expressed in all high levels in the bursa of Fabricius.

DOWAIN: The BH4 domain is required for anti-apoptotic for interaction with RAF-1 (By similarity).

SIMILARITY: Contains 1 Bcl-2 homology 1 (BH1) domain.

SIMILARITY: Contains 1 Bcl-2 homology 2 (BH2) domain.

SIMILARITY: Contains 1 Bcl-2 homology 3 (BH2) domain.

SIMILARITY: Contains 1 Bcl-2 homology 4 (BH4) domain.

SIMILARITY: Belongs to the Bcl-2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TaxID=9031;

the apoptosis-activating factor (APAF-1) (By similarity). SUBUNIT: Forms homodimers, and heterodimers with BAX, BAI Bcl-X(L). Heterodimerization with BAX requires intact BH1
                               FUNCTION: Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoietic and neural cells. Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding release of cytochrome c from the mitochondria and/or by binding

PTM: Phosphorylation/dephosphorylation on Ser-70 regulates Bcl2
anti-apoptotic activity. Growth factor-stimulated phosphorylation
on Ser-70 by PKC is required for the anti-apoptosis activity and
occurs during the G2/M phase of the cell cycle (By similarity). Ir
the absence of growth factors, Bcl2 appears to be phosphorylated
by other protein kinases such as ERKs and stress-activated
kinases. Dephosphorylated by protein phosphatase 2A (PP2A) (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
        the apoptosis-activating factor (APAF-1).

-Is SUBUNIT: Forms homodimers, and heterodimers with BAX, BAD, BAK and BC1-X(L). Heterodimerization with BAX requires intact BH1 and BH2 domains, and is necessary for anti-apoptotic activity. Also interacts with APAF-1, RAF-1 and TP53BP2 (By similarity).

-IS SUBCELIULAR LOCATION: Outer mitochondrial membrane, intracellular membrane of the nuclear envelope and the endoplasmic reticulum.

-IT TISSUB SPECIFICITY: Expressed in a variety of tissues, with highest levels in reproductive tissues. In the adult brain, expression is localized in mitral cells of the olfactory bulb, granule and pyramidal neurons of hippocampus, pontine nuclei, cerebellar granule neurons, and in ependymal cells. In prenatal brain, expression is higher and localized in the neuroepithelium and in the cortical plate.

-ID OMAIN: The BH4 domain is required for anti-apoptotic activity and for interaction with RAF-1 (By similarity).

-IP TM: Phosphorylation/dephosphorylation on Ser-70 regulates Bc12 anti-apoptotic activity and services activity. BCC is remired for the arti-apoptotic activity and anti-apoptotic activity.

Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the caspases. Inhibits caspase activity either by preventing the
anti-apoptotic activity. Growth on Ser-70 by PKC is required for
                                                                                                                                                                                                                                                                                                                                                                                   caspases. Inhibits caspase activity either by release of cytochrome c from the mitochondria

-1- FUNCTION; Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoletic and neural cells.
Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding to

the apoptosis-activating factor (APAF-1).
SUBUNIT: Forms homodimers, and heterodimers with BAX, BAD,
Bol-X(I). Heterodimerisation with BAX requires intact BH1 a
domains, and is necessary for anti-apoptotic activity (By
similarity). Also interacts with APAF-1, RAF-1 and TP53BP2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          anti-apoptotic activity. Growth factor-stimulated phosphorylation on Ser-70 by PKC is required for the anti-apoptosis activity and occurs during the G2/M phase of the cell cycle. In the absence of growth factors, Bcl2 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated kinases. Dephosphorylated by protein phosphatase 2A (PP2A) (By similarity). PTM: Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic activity, causes the release of cytochrome c into the cytosol promoting further caspase activity.

PISEASE: Involved in follicular lymphoma (FL) (also known as type to the cytosol structure) and considered to the cytosol structure caspase activity.

PISEASE: Involved in follicular lymphoma (FL) (also known as type to the cytosol structure) which involves BCL2 and immunoglobulin gene regions. BCL2 mutations found in non-Hodgin's lymphomas carrying the chromosomal translocation could be attributed to the Ig

                                                                                                                                                                         the appoptosis-activating factor (APAP-1) (By similarity).

-!- SUBUNIT: Forms homodimers, and heterodimers with BAX, BAA, BAK and Bc1-X(L). Heterodimerization with BAX requires intact BH1 and BH2 domains, and is necessary for anti-apoptotic activity. Also interacts with APAP-1, RAF-1 and TP53BP2 (By similarity).

-!- SUBCELLULAR LOCATION: Outer mitochondrial membrane, intracellular membrane of the nuclear envelope and the endoplasmic reticulum.

-!- DOWAIN: The BH4 domain is required for anti-apoptotic activity and for interaction with RAP-1 (By similarity).

-!- PTM: Phosphorylation/dephosphorylation on Ser-70 regulates Bc12 anti-apoptotic activity. Growth factor-stimulated phosphorylation on Ser-70 by PKC is required for the anti-apoptosis activity and occurs during the G2/M phase of the cell cycle (By similarity). In the absence of growth factors, Bc12 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated kinases (By similarity). Dephosphorylated by protein phosphatase 2A (PP2A) of the similarity in the cell cycle (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BCL2

Biophys. Res. Commun. 281:404-408(2001).
FUNCTION: Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoletic and neural cells. Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding trelease of cytochrome c from the mitochondria and/or by

RESULT JC7383

B-cell lymphoma 2 protein - Chinese hamster C;Species: Cricetulus griseus (Chinese hamst C;Date: 17-Nov-2000 #sequence\_revision 17-NC C;Accession: JC7383 hamster) 17-Nov-2000 #text\_change 28-Jul-2003

R;Tomicic, M.T.; Christmann, M.; Kaina, B. Biochem. Biophys. Res. Commun. 275, 899-903, A;Title: Cloning and functional analysis of a A;Reference number: JC7383

cDNA encoding 2000

the

hamster

Bcl-2 protein

A; Accession: JC7383 A; Contents: Ovary

P

A; Molecule type: mRNA A; Residues: 1-236 <TOM> A; Cross-references: GB: AJ271720 C; Comment: This protein has ant C; Genetics: has anti-apoptotic function, and supports cell survival

```
bcl-x transmembrane deleted - mouse
C;Species: Mus musculus (house mouse)

The present sequence is human Bcl-w, a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Wethods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see AAX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polynucleotides, a method for producing a pharmaceutical composition, a combined for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more modulates its activity is useful for preparing a medicament for treating compliance; its activity is useful for preparing a medicament for treating compliance; construction injury (CCI) and spared nerve injury (CNUND), chronic construction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at construction of the printed specification, but was obtained in electronic form directly from WIPO at the specification of the printed specification o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 193;

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity, bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell
